EXECUTIVE SUMMARY

Full-Stack Software Engineer with experience building scalable web applications, real-time distributed systems, AI-powered products, and production-grade APIs across modern frontend, mobile, and backend architectures. Strong background in microservices architecture, databases, cloud infrastructure, AI integration, and programmable communications platforms. Currently pursuing an LL.B. with a specialized focus on technology law and digital infrastructure regulation.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Go (Golang), Rust, Python, SQL

Frontend/Mobile: React, Next.js, React Native, Flutter, Tailwind CSS, DnD Kit

Backend & AI: Node.js (Express, NestJS), Rust (Axum), Python (FastAPI), ChatGPT / Codex, Claude, Mastra AI, n8n, REST APIs, GraphQL

Databases/ORMs: PostgreSQL, MySQL, MongoDB, Redis, Firebase, Supabase, Convex, Prisma, TypeORM, Mongoose

Cloud & Tools: AWS, Railway, Docker, RabbitMQ, WebSockets, WebRTC

PROFESSIONAL EXPERIENCE

Nitoons Ltd **March 2026 – Present**

Software Engineer

- Spearheaded full lifecycle software development for AI-powered mobile, web, and backend applications.
- Engineered Antroph's Aura, an AI therapeutic companion app, implementing response caching and request optimization to cut redundant AI model calls and minimize infrastructure costs.
- Built Voya, an AI agent and travel companion application, developing its mobile interface, backend, and automated workflows.
- Revamped One Take (Actors App), upgrading application architecture, feature set, and overall user experience.
- Architected production fintech backend services for a major Nigerian bank, building resilient APIs, business logic, secure authentication, and database models.

Paracletus Hub **January 2026 – March 2026**

Web Experience Lead

- Directed frontend architecture and UI/UX strategies for client-facing web and mobile applications.
- Built responsive, accessible UI systems and delivered market-ready, SEO-optimized MVPs to drive rapid validation.
- Enhanced page load performance, web accessibility standards, and search engine visibility across platform builds.

Skystudio **October 2025 – Present**

Freelance Software Engineer

- Engineered scalable software solutions for multiple client businesses, translating technical and business requirements into production-ready systems.
- Deployed, optimized, and maintained client applications in live cloud environments, ensuring high uptime and system stability.

HNG Tech **October 2025 – December 2025**

Backend Intern

- Built backend services utilizing Node.js (NestJS) and Python (FastAPI), refactoring monolithic modules into decoupled microservices.
- Designed RESTful APIs complete with validation pipelines, error handling, and robust database authorization controls.
- Integrated Mastra AI to create automated backend workflows and AI task processing.

PrymalLivestock **February 2025 – August 2025**

Full-Stack Developer

- Engineered an e-commerce platform supporting real-time inventory updates, user activity tracking, and order state management.
- Integrated Paystack payment gateway, enforcing transaction consistency and secure checkout processing.

- Developed business analytics dashboards, driving a 40% increase in transaction volume through performance and flow optimizations.

KEY PROJECTS

Real-Time Task Manager & Chat Platform | *Rust (Axum, SQLx), React, TanStack Query, WebSockets, WebRTC*

- Developed a full-stack real-time system featuring type-safe PostgreSQL access via SQLx and WebRTC video calling with backend signaling.
- Utilized TanStack Query for state caching and background sync; applied async Rust concurrency patterns and deployed services to AWS.

Distributed Notification Microservice System | *NestJS, RabbitMQ, PostgreSQL, Redis, Railway*

- Designed an event-driven microservices architecture using NestJS and RabbitMQ to process asynchronous email, push, and in-app notifications.

EasyCaller & Callio Telephony Platforms | *Rust, Go, React, Telephony Infrastructure*

- Created custom communication backends enabling internet-to-local call routing by combining programmable APIs with open-source telephony infrastructure.

Therapady Platform | *Next.js, React, Go, WebSockets, WebRTC*

- Built a telehealth platform connecting users with licensed therapists via real-time data exchange and audio/video streaming pipelines.

Drag-and-Drop Website Builder & Code Editor | *React, Redux Toolkit, DnD Kit, Monaco Editor*

- Built a visual web builder with live code editing, real-time component rendering, and optimized canvas UI performance.

EDUCATION & TRAINING

University of Ibadan **2021 – 2026**

Bachelor of Laws (LL.B.)

Focus: Technology Law, Intellectual Property & Digital Infrastructure Regulation

Bootcamps & Mentorships:

- **BuildGems** – Software Development Mentee (*March 2025 – May 2025*): Trained in modern software development practices, system design, and database normalization.
- **Asdin.net** – Full-Stack Development Bootcamp Trainee (*November 2024 – March 2025*): Developed and deployed end-to-end full-stack applications with JavaScript/TypeScript and RESTful APIs.

INTERESTS & LANGUAGES

Interests: Systems Programming, Cloud Infrastructure, Telecom & Network Infrastructure, AI Systems, Tech Law

Languages: English (Fluent), Latin, French
